

Module 02 - Linear Equations

List of objectives for Module 2 - Linear Equations.

In this homework, we will review the properties and how to construct linear functions. We will also review solving linear equations in preparation for solving more difficult types of equations later. The objectives for this homework are:

- (a) Construct linear functions with a slope and point or with two points.
- (b) Convert a linear function between slope-intercept form and Standard form.
- (c) Convert between a linear equation and the graph of a linear equation.
Solve linear equations.

Learning outcomes: Recognize and construct linear functions as well as solve linear equations.
